

## Maintenance

Skinz cost way less to install than preparing and painting existing damaged bollards – and you only have to do it once.

## Installation

Skinz are supplied with everything you need and can be fitted to most bollards in seconds using nothing more than a hand-saw if cutting to length is required.

## Skinz Range

Skinz come in four sizes with 3mm wall thickness. They can be retrofitted to any brand of bollard from 90 to 220mm diameter. Reflective tape kits available.

## Soft Protection

Skinz offer soft protection for vehicle doors or light impacts in shopping centre car parks that you don't get with plain steel bollards.
