

LINEBACKER BR BOLLARD

Asset Protection Barriers

The Linebacker BR (Brace Reinforced) Bollard has been designed for situations where surface mounting with very shallow fixing is required. Twin base plates and diagonal bracing mean the BR is extremely strong, making it ideal for asset protection installations where the rear brace can be embedded within merchandising units out of the way of pedestrians.

Unlike a conventional surface mounted bollard, loads are transmitted down the bollard and through the diagonal brace to the dual base plates allowing it to withstand heavy impacts.

Features:

- Much stronger than conventional bollards.
- No risk to underground services.
- Provides improved protection against drive-throughs.
- Hot dip galvanised and powder coated finish.
- Embedment into merchandising units conceals brace.
- Can be installed on sloping or stepped ground.

Bollard:	90mm diameter mild steel x 5mm wall.
Finish:	Galvanised and powder coated White.
Height:	1000mm.
Brace:	Mild steel 48.3mm dia. x 3.2mm wall.
Weight:	16.5kgs.
Installation:	Surface mounted onto concrete surface.

Linebacker BR bollards can be installed onto sloping or stepped ground levels.
