

Heavy Duty Loading Dock Bumper

The LDB730 Series loading dock bumper has been designed for the most demanding of industrial sites where nothing else is tough enough. It consists of three key elements – a heavy galvanised steel chassis which is rigidly bolted to the loading dock face. An impact absorbing moulded rubber core which is housed in the chassis, and an 8mm thick galvanised floating strike face. This strike face is designed to allow the trucks to grind up and down on the bumper without damage to the building structure.

Note: The LDB730 is designed to withstand serious impacts and must be installed on a suitably reinforced structure.

Engineered to reduce costs.

Flush Mounting Dock Bumper LDB730

Where the loading dock height is at an appropriate level, the **LDB730** can be mounted to the dock face using suitable concrete screw bolts so that it is flush.

Quality Products

PART No.	DESCRIPTION
LDB730	Loading dock bumper for flush mounting 730 x 250mm with fixings (53kgs)
