

KELRYAN

PILOT & NEATA SYSTEMS Pedestrian/Crowd Control & Hygiene Solutions

Innovative pedestrian and crowd control systems, Pilot and Neata, offer users an easy-to-deploy way to manage and control crowds and pedestrians.

The Pilot and Neata Systems are in use by many of the largest organisations and facilities in Australia, as they offer reliable solutions that can handle high-throughput public and workplace spaces in both removable and fixed installations.

When combined with their innovative attachment systems, Pilot and Neata can also be designed and deployed to manage a variety of specific use cases.

For example, with the cradle and pump bottle attachments and integrated signs promoting hygiene practices, the Pilot and Neata Systems can form an integral part of ensuring public and workplace safety and hygiene during the present COVID-19 outbreak.

Please find below several ready to order packages targeted at this use case.

Contact KELRYAN's dedicated sales team today at sales@kelryan.com or on 1300 535792 to find out more about how these solutions can be used in your business or facility in order to improve public and worker safety and hygiene.

Hand Sanitiser Stations

Wall Mount Kit

Part No.	Product Description

Part No.	Product Description
PILOT-CK	Cone Kit
PILOT-PB500	Replacement bottles – 10 pack

Mobile Kit

Part No.	Product Description
PILOT-MK	Mobile Kit
PILOT-PB500	Replacement bottles – 10 pack

Pilot & Neata Case Studies

Large Railway Operator

For one large railway operator, the Neata Queue Management System provided an easy-to-use, cost-effective and aesthetically pleasing crowd control system at several urban and regional railway stations, replacing an existing off-the-shelf product that couldn't handle the wear and tear of a high-throughput public space.

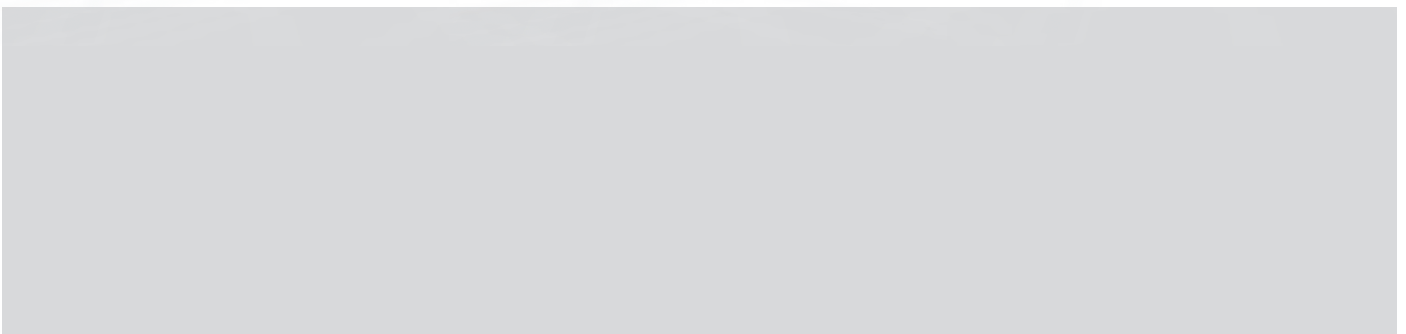

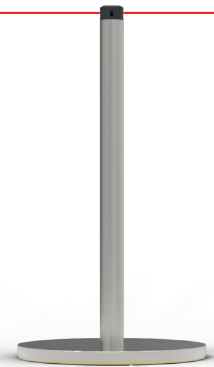

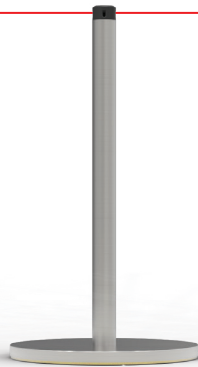

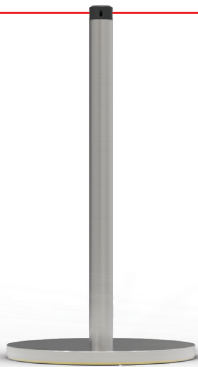

Utility Network Provider

For this utility network provider, the Pilot System provided a dependable way to control pedestrian and crowd access while performing sometimes dangerous repair and service on their network across Australia, replacing an existing system that was prone to breakage and didn't offer the reliability of Barrier Group's unique Pilot System.

Major Australian Museum

The Neata Queue Management System was deployed by a major Australia museum with millions of annual visitors to help effectively separate crowds from priceless works of art, while also streamlining wait times and keeping customers engaged.
