GARD GT

Design to your needs

BARRIER GARD GT

The road barrier designed to integrate perfectly in any context.

A slight chassis design enriched with high brightness **LED traffic lights** improves the level of perception and control.

GT range is made of **galvanized and painted steel** (RAL 7024 wrinkled) with accessories predisposition.

It is also available in **Stainless Steel** version (Satin finished) or **Customised painting** versions (RAL Custom).

With a clear passage up to **4 meters for the GT4** model and up to **7.8 meters for the GT8** model, the new GARD GTs are the ideal solution for residential, tertiary or industrial context.

The **new advanced electronics** offers several control options.

GARD GT is **fully settable and remotely controlled** through the platform CAME Connect. CAME gateway Wi-Fi slot is available to connect the GT to Wi-Fi network and enjoy the wide range of functionality offered by the platform.

A **native serial port with Modbus protocol** is also available, providing an Ethernet interface for advanced third-party system integration, such as access control or parking systems.

A wide range of accessories completes the range, like the new **full-height skirt** up to 1.3 meters, perfect to prevent unauthorized access to vehicles, or pedestrians and safety accessories, like **Laser Safety Sensors CAT 2** or new devices compatible with **CAME CXN bus system**.

GARD GT

Design to your needs

BARRIERS GARD GT

The **GARD GT** series is tested to be compliant with **European Norms** on impact forces. Standards EN 12453 specify the compliance and safety requirements for automatic closing systems that could be in contact with people. They define all of the technical solutions for securing users' systems.

The 24 V DC gear-motor with **encoder** and the new control board with **Automatic Speed Control** grant an easy management of the forces applied.

To satisfy the most exigent cases, the control board also offers safety test for inputs that allow the use of safety devices such as laser sensors or other similar equipment EN ISO 13849-1 (PI "d" CAT 2); EN 12978; EN 12453 (Device E).

This product is tested in conformity with **EUROPEAN NORMS** on impact forces

GARD GT

Design to your needs

BARRIERS GARD GT

The new **GARD GT** series features an **innovative hi-tech firmware** for movement control, which reduces all potential malfunctions **automatically managing the speed** of the motor based on the boom position. The installer only sets the basic parameters requested during startup, such as the length of the boom and the first calibration. The **firmware measures and adapts constantly** the speed and the deceleration at each cycle thanks to the feed-back provided by the encoder.

Smooth movement and adaptive deceleration

Improved obstacle detection

Greater durability for the product

BARRIER GARD GT: Macro specifications

Visual concept:

Two Platforms:

- GT4 platform from 2,5m to 4m
- GT8 platform from 4m to 7,8m

Main product features:

- **New slight** design
- Galvanized and painted Steel or Stainless steel **chassis**
- Predisposition for **integrated LED** crown and all accessories
- All versions **24Vdc with encoder**
- **Control board** positioned on the top of the barrier
- Single type of **balancing red spring** included
- **New booms** ready for green/red strip led
- **Articulated Joint boom** for low ceiling on GT4
- **Battery** backup system
- **Breakaway** boom fastening on GT4/GT8
- **New skirts** standard and with upper option
- **Retrofit** with GARD 4 / GARD 8 series
- **EN Tested** compliant with impact forces
- **Colour RAL 7024 wrinkled**

Technical data

Max clear passage (m)	GT4 4m – GT8 7,8m
Opening time	GT4 2-4 s./GT8 4-8 s.
Power supply (V)	120 or 230 AC
Temperature (°C)	-20 ÷ +55
Duty cycle	Intensive use

REQUEST FOR BARRIERS WITH "CUSTOM" PAINTING:

- Only custom painting with "RAL" colors is provided.
- Delivery time is 8-10 weeks.
- "CUSTOM" painting is intended for the cabinet and door only. The top cap and plastic covers painting is not provided.
- For technical reasons, the paint finish is always the same as the standard model.

BARRIER GARD GT4 VALUE PROPOSITION

Application field, mechanical characteristics and new functionalities

- Application from **2,5 m up to 4 m** clearance
- Design for **Heavy Duty cycle**.
- Models with power supply **230Vac or 120Vac** versions.
- New **24Vdc motor with encoder** with heavy duty brushes.
- **Compliant with EN standards**: the GARD GT can easily pass successfully the impact tests.
- Great durability **MCBF up to 3 millions**.
- Opening **Speed: 2-4 secs.** with 2 to 4-meter boom.
- Multifunction control board with **Digital inputs and CXN BUS input**.
- **CAME Connect Ready** electronics and **CAME KEY slot** for smart setup
- Boom and Crown **Red/Green LED** integration for traffic flows control.
- Manages **up to 250 users** with RFID card, or digital code, or transmitters.
- New accessories and **full height skirt** (upside/downside) available.

BARRIER GARD GT4: Product layout

BARRIER GARD GT4: New balancing system

NEW

New balancing System

The new balancing system allows the use of single spring model, already included with the barrier. The balancing spring changes positions on the lever depending the length and weight applied.

Benefits:

- Avoid mistakes on spring selection.
- Decrease the stock due to different spring models.
- Allows configuration changes without balancing limits.
- Reduce the No. of items to be considered for sales

Easy to Choose / Easy to Sell

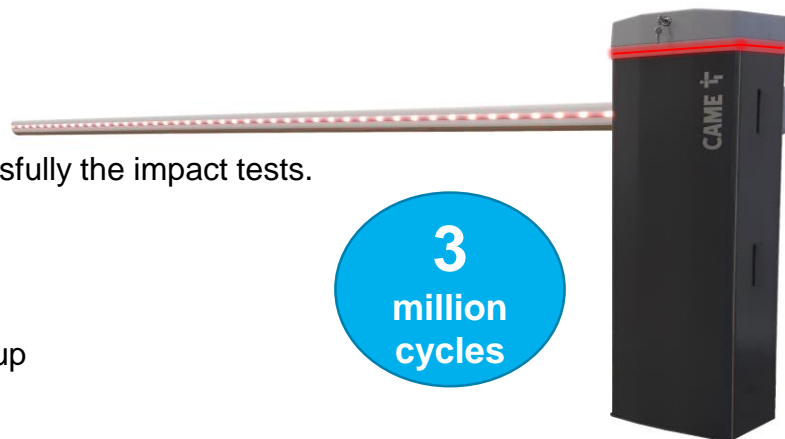

BARRIER GARD GT8 VALUE PROPOSITION

Application field, mechanical characteristics and new functionalities

- Application from **4 m up to 7,8 m** clearance
- Design for **Heavy Duty cycle**.
- Models with power supply **230Vac or 120Vac** versions.
- New **24Vdc motor with encoder** with heavy duty brushes.
- **Compliant with EN standards**: the GARD GT can easily pass successfully the impact tests.
- Great durability **MCBF up to 3 millions**.
- Opening **Speed: 4-8 secs.** with 4 to 8-meter boom.
- Multifunction control board with **Digital inputs and CXN BUS input**.
- **CAME Connect Ready** electronics and **CAME KEY slot** for smart setup
- Boom and Crown **Red/Green LED** integration for traffic flows control.
- Manages **up to 250 users** with RFID card, or digital code, or transmitters.
- New accessories and **full height skirt** (upside/downside) available.

CAME CXN – BUS PORT

NEW

The **GARD GT** series features native **CXN BUS port** for Bus accessories.

The BUS CXN system is a **non-polarized 2-wire BUS** that allows an extremely **easy wiring** among all compatible CAME accessories. By the control board, the system allows you to have a complete diagnosis of all the configured accessories, uniquely identifying the device to be replaced.

The BUS CXN will support **command devices, photocells, safety devices, flashing lights.**

The connection to the bus is very versatile and can be **Line, Star or Mixed.**

Strip LED R/G

803XA-0360

Electro block
For GT series

803XA-0270 : Boom 90X60 L.4220 mm (4000 mm clearance)

White painted aluminum boom 90X60 mm, complete with LED groove cover profile and yellow shock-resistant rubber profile.

The new shape guarantees 50% higher rigidity compared with semi-elliptic boom at the same weight per meter condition. The new boom includes the shock-resistant rubber profile and the inner reinforcement.

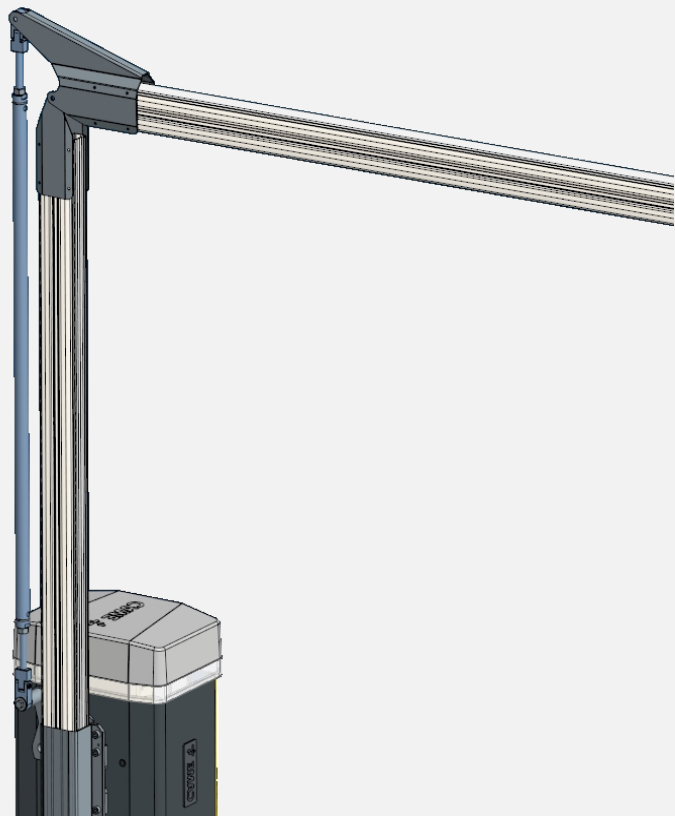

803XA-0320 : Breakaway fastening for boom 90X60

The breakaway boom system prevents breakage of important parts (e.g. chassis or gear-motor) in the event of forced or involuntary impact against the boom.

The system is complete with magnetic contact for total blocking of the movement after the impact. The barrier and its functionality can be restored manually in a short time and without the intervention by the technical service.

803XA-0310 : Articulated Joint for boom 90X60

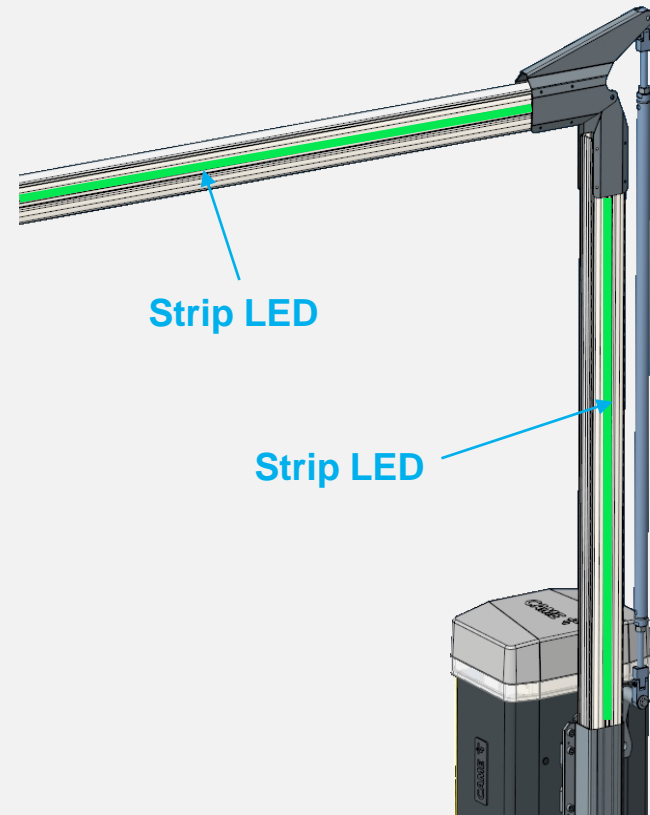

The articulated joint is made for particular applications like underground garages. The articulation can be adapted to different sizes with a minimum tall ceiling of 2 m.

803XA-0190 : Connecting cable kit for strips LED
(when applied to articulated joint).

The articulated joint allows the use of strip LED on both parts of the articulation. The application consists on using one pc. of connecting cable kit with two pcs. Strip LED, to join the parts and bring power supply from the control board.

803XA-0400: Boom 130X85 L. 4340 mm (4000 mm clearance)

803XA-0410: Boom 130X85 L. 6340 mm (6000 mm clearance)

White painted aluminum boom 130X85 mm, complete with LED groove cover profile and yellow shock-resistant rubber profile.

The new shape guarantees 30% higher rigidity compared with tubular 100 mm boom at the same weight per meter condition. The new boom includes the shock-resistant rubber profile and the inner reinforcement.

803XA-0420 : Modular Boom L. Max. 7800 mm (Clearance)

Complete set including two pieces boom (4-meter) interconnected in a telescopic solution. The **Modular system** uses a part of the 4-meter boom (small section) as a “joint” between the booms. This solution avoid the use of separate parts between booms and improves the strength.

- Faster installation.
- Higher Strength.
- Less weight with minimum effort for the components.

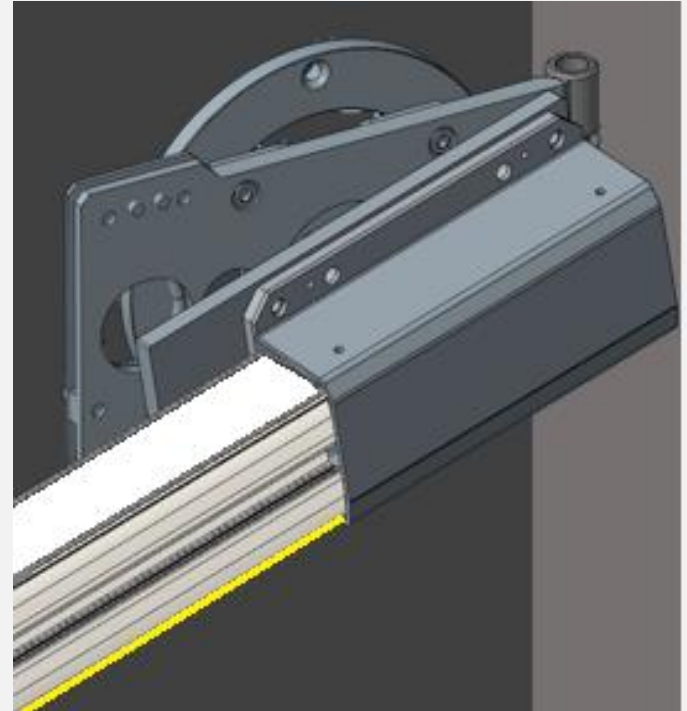

803XA-0390 : Breakaway fastening for boom 130X85

The breakaway boom system prevents breakage of important parts (e.g. chassis or gear-motor) in the event of forced or involuntary impact against the boom.

The system is complete with magnetic contact for total blocking of the movement after the impact. The barrier and its functionality can be restored manually in a short time and without the intervention by the technical service.

Note: the breakaway can be used up to 6-meter boom

BARRIER GARD GT4 - GT8: Strip LED for booms

GARD GT4

803XA-0020 : Red/Green Strip LED for boom up to 4-m long

803XA-0150 : Red/Green Strip LED for boom up to 3-m long

803XA-0160 : Red/Green Strip LED for boom up to 2-m long

GARD GT8

803XA-0240 : Red/Green Strip LED for boom up to 6.5-m long

803XA-0550 : Red/Green Strip LED for boom up to 8-m long

BARRIER GARD GT4 - GT8: Mobile Support

Rubber stopper

Spring

Threaded bar for height regulation

803XA-0330 : New Mobile support

The new mobile support is hooked directly to the lower groove and fixed without extra work to the boom.

It offers also a new spring positioning and rubber stoppers to avoid oscillations during the barrier movement.

BARRIER GARD GT4 - GT8: Fix support

001G02807 : New Fix Support

The new fix support offers different regulations in way to be adapted to all the boom sections.

The sides brackets slide for a few centimetres opening the angle that hold the boom while it is closed.

BARRIER GARD GT4 - GT8: Skirt

803XA-0340 : Aluminium Skirt

The new skirt is available in module with length 1721 mm. The new design features many technical improvements that reduce the fitting time for the installer and increase durability. The skirt is connected to the boom through support brackets hooked to the boom profile (strong fitting surface) and offers rubber stopper to dampen the stripes bending while opening. Two connection brackets are included on each module.

Connection Brackets between modules

Rubber stopper

BARRIER GARD GT4 - GT8: Full Height Skirt

803XA-0350 : Full Height Aluminium Skirt

The Full Height Skirt is available in module with length 1721 mm up to 1,3-meter height. The new design features many technical improvements that reduce the fitting time for the installer and increase durability. The skirt is connected to the boom through support brackets hooked to the boom profile (strong fitting surface) and offers rubber stopper to dampen the stripes bending while opening. The full height skirt is particularly used to control entrances that require prevention of unauthorized vehicle and pedestrian accesses. Two connection brackets are included on each module.

Max. number of modules:

2 pcs. For GARD GT4 with 4-meter boom

3 pcs. For GARD GT8 with 6-meter boom

Rubber stopper

Note: the full height skirt cannot be used with modular boom [803XA-0420](#)

BARRIER GARD GT4 - GT8: Bracket for mobile support and skirt

803XA-0440 : Bracket for mobile support and skirt

The hooking bracket allows the use of mobile support and skirt simultaneously.

BARRIER GARD GT4 - GT8: Magnetic Lock

803XA-0360 : Magnetic Lock for boom and fix support

The new fix support also offers the possibility to install a magnetic lock to hold the boom in closed position and prevent damages in case of forcing.

The lock, positioned on the fix support is controlled directly by the ZL392 output EB-EB without using any additional electronic equipment. Holding Force: 250kg

BARRIER GARD GT4 - GT8: CAME KEY

806SA-0110: CAME KEY

The **GARD GT** series features native slot for CAME Key compatibility and offers many advantages for the installer.

Product Features:

- The installer will use the **Came Key** to connect his own smartphone to the control board by local connection (Wi-Fi).
- Thanks to the Came **SetUp App**, the setting and the maintenance of the operators will be easy, intuitive and fast.
- Each installer can **backup the setting** on the cloud Came Connect and retrieve them at any time from any smartphone.

BARRIER GARD GT4 - GT8: CAME GATEWAY Wi-Fi

806SA-0140: CAME GATEWAY WIFI

The **GARD GT** series features native slot for CAME Gateway Wi-Fi and offers many advantages for the installer.

Product Features:

The **Gateway Wi-Fi** is a device that allows to connect the automation to your home router and explore all the potential of the CAME Connect cloud.

The device allows you to control the automation through the **APP Automation** for opening and closing commands.

CAME GATEWAY WIFI is **compatible with Alexa**, so you just need to give a vocal command to open, close or ask for the status of your automation.

If a Wi-Fi network is not available, the device can be set as a **Bluetooth selector** allowing you to operate the automation locally with the App AutomationBT.

BARRIER GARD GT4 - GT8: Magnetic Loop Detectors

009SMA/009SMA2: Magnetic Loop Detector 1 or 2 channels

The magnetic loop Detector is commonly used to detect presence and give opening commands or act as safety and reclose signal. Available one channel or double channel powered 24V.

BARRIER GARD GT4 - GT8: Input Output board

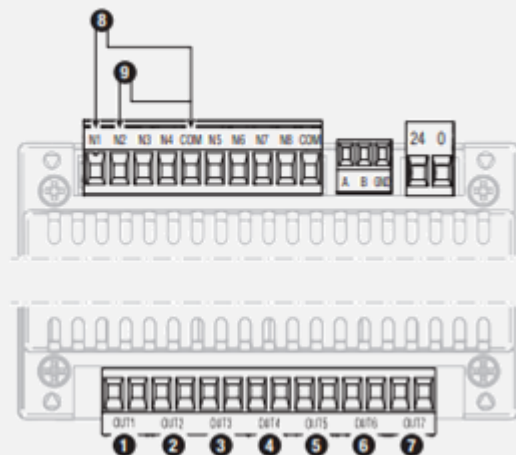

806SA-0160 : I/O board

Work in Progress

The **I/O board** can be used as an optional in case the GARD GT barrier needs to be installed **with PARKARE PARKING SYSTEM**. The board offers 7 neutral outputs for barrier feed-back and two digital inputs for OPEN and CLOSE separate commands. It can be connected directly to RSE 2 and be set as CRP by F49.

Function of the outputs of the RS485 I/O board *

- ❶ Contact output indicating obstacle detection indication
 - ❷ Contact output indicating open boom
 - ❸ Contact output indicating closed boom
 - ❹ Contact output indicating boom drop-away
 - ❺ Open inspection hatch signal contact output
 - ❻ Released gearmotor signal contact output
 - ❼ CX input status signal contact output
 - ❽ Input for the connection of a button with OPEN ONLY function (COM-N1)
 - ❾ Input for the connection of a button with CLOSE ONLY function (COM-N2)
- ☐ Each output is a clean contact (NO) with maximum capacity 1A – 24 V DC.

BARRIER GARD GT4 - GT8: Heater Kit

001PSRT01: Heater kit

Thermal heater 80W for GARD GT series. Includes thermostat and allows optimal working conditions **up to -40° C**

BARRIER GARD GT4 - GT8: Laser Sensor

806XG-0030: Laser sensor

The Laser sensors is an accessory certified **EN ISO 13849-1 (PI “d” CAT 2); EN 12978; EN 12453 (Device E)**. It is used to satisfy the most exigent cases when it is not possible to perform impact tests required by the Norms. The ZL392 control board offers safety test for inputs that allow the use of such important safety devices.
